- 6.1 0.1.4 (2018-12-18) . . . 13
- 6.2 0.1.3 (2018-12-16) . . . 13
- 6.3 0.1.2 (2018-12-16) . . . 13
- 6.4 0.1.1 (2018-12-16) . . . 13
- 6.5 0.1.0 (2018-12-16) . . . 13

7 Indices and tables **15**

CHAPTER 1

A Python API Client for https://www.bulker.gr

A Python Client for v1.0 of Bulker.gr SMS HTTP API

- Free software: MIT license
- Documentation: https://bulkergr-api.readthedocs.io.

1.1 Features

- Submit SMS to the API
- Converting CSV text response to dict

1.2 TODO

- Integrate delivery receipts
- Integrate balance queries
- Enhance library's features of submitting
- Enhance library's validity checks
- Complete tests based on API
- Write the docs
- Enable cli functionality

1.3 Credits

This package was created with :heart: by negletios.

CHAPTER 2

Installation

2.1 Stable release

To install Bulker.gr Python API Client, run this command in your terminal:

```
$ pip install bulkergr_api
```

This is the preferred method to install Bulker.gr Python API Client, as it will always install the most recent stable release.

If you don't have pip installed, this Python installation guide can guide you through the process.

2.2 From sources

The sources for Bulker.gr Python API Client can be downloaded from the Github repo.

You can either clone the public repository:

```
$ git clone git://github.com/negletios/bulkergr_api
```

Or download the tarball:

```
$ curl  -OL https://github.com/negletios/bulkergr_api/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

CHAPTER 3

Usage

To use Bulker.gr Python API Client in a project:

```
import bulkergr_api
```

CHAPTER 4

Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

You can contribute in many ways:

4.1 Types of Contributions

4.1.1 Report Bugs

Report bugs at https://github.com/negletios/bulkergr_api/issues.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with "bug" and "help wanted" is open to whoever wants to implement it.

4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with "enhancement" and "help wanted" is open to whoever wants to implement it.

4.1.4 Write Documentation

Bulker.gr Python API Client could always use more documentation, whether as part of the official Bulker.gr Python API Client docs, in docstrings, or even on the web in blog posts, articles, and such.

4.1.5 Submit Feedback

The best way to send feedback is to file an issue at https://github.com/negletios/bulkergr_api/issues.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

4.2 Get Started!

Ready to contribute? Here's how to set up *bulkergr_api* for local development.

1. Fork the *bulkergr_api* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/bulkergr_api.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv bulkergr_api
$ cd bulkergr_api/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

   Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 bulkergr_api tests
$ python setup.py test or py.test
$ tox
```

   To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.7, 3.4, 3.5 and 3.6, and for PyPy. Check https://travis-ci.org/negletios/bulkergr_api/pull_requests and make sure that the tests pass for all supported Python versions.

4.4 Tips

To run a subset of tests:

```
$ py.test tests.test_bulkergr_api
```

4.5 Deploying

A reminder for the maintainers on how to deploy. Make sure all your changes are committed (including an entry in HISTORY.rst). Then run:

```
$ bumpversion patch # possible: major / minor / patch
$ git push
$ git push --tags
```

Travis will then deploy to PyPI if tests pass.

CHAPTER 5

Credits

5.1 Development Lead

- Yiannis Inglessis <negtheone@gmail.com>

5.2 Contributors

None yet. Why not be the first?

CHAPTER 6

History

6.1 0.1.4 (2018-12-18)

- Basic functionality and testing.

6.2 0.1.3 (2018-12-16)

- No changes from the initial commit, just testing out the release procedure.

6.3 0.1.2 (2018-12-16)

- No changes from the initial commit, just testing out the release procedure.

6.4 0.1.1 (2018-12-16)

- No changes from the initial commit, just testing out the release procedure.

6.5 0.1.0 (2018-12-16)

- First release on PyPI.
